

Fibre Wads 12ga and 20ga.

New Range of Diana & Cork Filler Wads.

FES modular biodegradable wads; using either a single Diana or Evo II wad plus if required a cork filler to produce the total required wad length.

Thus giving you the home loader the largest choice of fibre wads available anywhere.

Cork can also help reduce the effects of the set back forces when the cartridge is fired resulting in less deformed pellets and hence better down range pattern.

FES investing in reloading, with our own CNC machine.

12ga Fibre Wads & Over Powder Cards

Type	Length	Per 100	Per 500	Per 1000
